Summary

Full Stack Developer with a strong backend focus, experienced in building scalable web applications using React.js, Node.js, Express.js, and RESTful APIs. Proven ability to design and implement end-to-end solutions including authentication, role-based access control, database modeling, and API integration. Hands-on experience with MongoDB, PostgreSQL (Supabase), and Firebase for data storage and real-time features.

Developed multiple production-ready projects, including a multi-role e-commerce platform and a blockchain-based voting system, demonstrating understanding of system design, security, and modern web architectures. Comfortable working with deployment pipelines, CI/CD workflows, and cloud platforms such as Netlify and Render.

Strong foundation in problem-solving, requirement analysis, and collaborative development using tools like Git, GitHub, JIRA, and Slack. Actively leverage AI-powered tools and LLMs for learning, research, and productivity. Seeking Full Stack or Backend Developer roles where I can contribute to building reliable, secure, and high-performance applications while continuously growing technical depth.

Technical Skills

Languages: JavaScript (ES6+), HTML5, CSS3

Frontend: React.js, Tailwind CSS

Backend: Node.js, Express.js, RESTful API design, Authentication, Authorization

Databases: MongoDB, Supabase (PostgreSQL), Firebase

Blockchain: Smart contracts, decentralized application (DApp) fundamentals

Tools & Collaboration: Git, GitHub, Postman, VS Code, JIRA, Slack

Deployment & CI/CD: Netlify, Render, automated deployment pipelines

Soft Skills: Communication, Requirement Understanding, AI-LLMs for study & research

Projects

Full-Stack E-Commerce MVP | *React, Node.js, Express, MongoDB* 2024 – Present

- Built a complete 3-role e-commerce platform (Admin, Dealer, Consumer) with backend-heavy architecture
- Designed scalable REST APIs using Node.js and Express with role-based access control
- Integrated MongoDB and Supabase (PostgreSQL) for structured and relational data management
- Implemented authentication, authorization, and real-time features using Firebase
- Deployed frontend on Netlify and backend on Render with CI/CD pipelines
- GitHub: github.com/Debdaru07/E-Commerce-MVP
- Live Demo: e-commerce-mvp.netlify.app

Blockchain-Based Voting System | *Blockchain, Smart Contracts, Web3* 2024

- Designed a decentralized voting system focusing on security, transparency, and data integrity
- Explored smart contract logic to prevent vote tampering and ensure immutable records
- Studied privacy-aware voting mechanisms and blockchain consensus concepts
- GitHub: github.com/anirbandebnath9212-hue

Developer Portfolio Website | *React.js, Tailwind CSS* 2023

- Built a responsive personal portfolio to showcase full-stack and backend-focused projects
- Implemented clean UI components using React and Tailwind CSS
- Optimized for performance, responsiveness, and recruiter-friendly presentation
- GitHub: github.com/anirbandebnath9212-hue/portfolio

Education

Camellia Institute of Technology

B.Tech in Computer Science & Engineering (Pursuing, 4th Year)

Madhyamgram, West Bengal

2021 – Expected 2025
